

**ABSTRACT**

The present invention provides a stretchable fabric that may serve as a switch device or coupling to an electronic 5 device and a power source by merely stretching or pushing the fabric. The stretchable fabrics may be usable in a wearable garment, furniture, or other suitable locations where it can be incorporated to close a circuit. Through a releasable stretching or pushing action by the user, electrically 10 conductive strips integrated in the fabrics come in contact to activate related ancillary equipment such as power supplies or electronic devices.
